Domestic heating solutions

Quality and reliability

More than 1.5 million Vokèra boilers have been installed around the UK and Ireland demonstrating our wealth of experience in home heating. Vokèra has one of the highest boiler reliability statistics in the market, which is coupled with a 30 year unblemished record of product quality. At every stage, from research and development through to production and after sales support, we build quality in as standard.

Vokèra base the monthly reliability factor on the number of products at risk, measured against the quantity of bona-fide warranty interventions carried out during the same period

Service and support

Vokèra employed engineers and approved agent network support every installation, giving you peace of mind that should you need us, we are there. Our engineers boast a 95% first fix rate, ensuring a rapid resolution should any Vokèra appliance develop a fault during the warranty period.

Vokèra by Riello technology

Radial heat exchanger

Starting from the raw materials this key component is designed and built in-house ensuring the highest quality, no compromise. This provides maximum control over the manufacturing process, ensuring excellent flexibility and reliability of the thermal and corrosion resistant properties of the heat exchanger.

The innovative heat exchanger, found in our evolve range, is a single piece component manufactured from superior quality aluminium alloy that has been specifically chosen for its excellent corrosion resistant properties and high thermal transfer rate. The radial design and large cross-sectional area eliminate the risk of scaling or superheated areas.

Active Combustion Control (ACC) and Carbon Monoxide (CO) monitor

The **evolve** range features ACC (Active Combustion Control), which uses the burner electrode ionisation current to change the air/gas mixture of the **evolve**. The quality of the gas affects the ionisation signal and by adjusting the air/gas mix in order to maintain a specific ionisation value; the **evolve** will use less gas when the quality is good. Thus optimising gas consumption and reducing emissions for the same performance.

Safety is an important consideration with any gas appliance, so the **evolve** takes this a step further and features an excess CO monitor. In the unlikely event of excess CO being detected the **evolve** will shut down and not run until the issue has been resolved.

Intelligent controls

Vokèra boilers boast some of the best use of technology, including OpenTherm, that help maximise efficiency. We are committed to making our controls as straight forward as possible including a Tyco connection on a variety of our control receivers*, ensuring our controls are extremely simple to install with our boilers. BeSMART offers Internet connected control and multi-zone efficiency.

We also offer online tutorials and a controls course to enable you to make the most of our energy saving controls.

**Specific boiler and control compatibility applies. Please see page 24 for more information on Vokèra intelligent controls.*

B	ABOVE AN OPENING*	300MM
C	TO THE SIDE OF AN OPENING*	300MM
D	BELOW GUTTERS, DRAIN PIPE ETC	25MM
E	BELOW EAVES	25MM
F	BELOW BALCONY, CARPORT ROOF ETC	25MM
G	TO SIDE OF A VERTICAL SOIL/DRAIN PIPE ETC	25MM (60MM FOR 80/125 FLUE)
H	FROM INTERNAL OR EXTERNAL CORNER OR BOUNDARY	25MM (60MM FOR 80/125 FLUE)
I	ABOVE GROUND, ROOF OR BALCONY LEVEL	300MM
J	FROM A SURFACE OR BOUNDARY FACING A TERMINAL	600MM**
K	FROM A TERMINAL FACING A TERMINAL	1200MM
L	FROM AN OPENING IN THE CARPORT INTO THE BUILDING	1200MM
M	VERTICALLY FROM A TERMINAL ON THE SAME WALL	1500MM
N	HORIZONTALLY FROM A TERMINAL ON THE SAME WALL	300MM
P	FROM A STRUCTURE TO THE SIDE OF A VERTICAL TERMINAL	300MM
Q	FROM THE TOP OF A VERTICAL TERMINAL TO THE ROOF FLASHING	AS DETERMINED BY FIXED COLLAR OF VERTICAL TERMINAL
R	TO THE SIDE OF A BOUNDARY	300MM
S	TO THE SIDE OF AN OPENING* / WINDOW ON A PITCHED ROOF	600MM
T	BELOW AN OPENING* / WINDOW ON A PITCHED ROOF	2000MM
V	FROM A VERTICAL TERMINAL TO AN ADJACENT OPENING*	CALL VOKĚRA TECHNICAL SUPPORT FOR ADVICE
W	FROM A VERTICAL TERMINAL TO AN ADJACENT VERTICAL TERMINAL	300MM (ONLY IF BOTH TERMINALS ARE SAME HEIGHT)

Flue systems and terminal locations should be located and installed in accordance with current Building Regulations (UK) or I.S. 813 (ROI).

The terminal should be located where the dispersal of combustion products is not impeded and with due regard for the damage and/ or discolouration that may occur to building products located nearby.

The terminal must not be located in a place where it is likely to cause a nuisance. Water vapour may condense on leaving the terminal. The effect of such plumeing must be considered.

Flue options

Installation options

The flue system installation options as detailed below are not generic for all concentric flues. Please see the boiler and flue compatibility tables for information on specific appliances suitability with the different concentric flue systems.

Flue system options		
CONFIGURATION	DESCRIPTION	COMPATIBLE WITH
1	HORIZONTAL CONCENTRIC	ALL APPLIANCES
2	VERTICAL CONCENTRIC	ALL APPLIANCES
3	HORIZONTAL PARALLEL SYSTEM	ALL APPLIANCES
4	VERTICAL PARALLEL SYSTEM	ALL APPLIANCES

N.B. A boiler top adaptor/kit is required when using the 80/125mm concentric and 80mm parallel systems.

Also available is the 80mm flexible PP flue system range consisting of Polypropylene components and a flexible Polypropylene liner. A full range of flue components and accessories to facilitate different flue requirements are available.

The flexible PP flue system is suitable for multiple applications and is for use with high efficiency appliances.

The range includes several different connectors that enable flexible PP to be connected to rigid PP / flexible PP to flexible PP when off-cuts may be required to be joined together.

The 80mm + 80mm parallel (twin) system enables greater flue lengths to be achieved and can be used in either a horizontal or vertical configuration. However the parallel system must be converted back to a concentric system at the point of termination. Dedicated flue kits are available for this purpose.

An adaptor kit is required to convert the appliance flue outlet from a concentric configuration into a parallel configuration.

When used in the horizontal plane, the flue system should be installed so that it has a 1° minimum fall back to the boiler. This will enable any condensate fluid that may form, to drain via the condensate connection / trap.

The exhaust pipe can reach very high temperatures and so must be adequately protected to avoid contact with persons and / or materials that could be damaged as a result.

The air inlet pipe should be insulated to reduce the possibility of condense forming on the outside of the pipe.

Vokèra can advise that the Gas Safe Technical Bulletin, TB 008 ed2.1, gives specific advice on the requirements for new installations with a flue routed within a void, where appropriate means for the gas engineer to visually check the flue must be incorporated (this is normally achieved by inspection hatches located in the ceiling).

Boiler and flue compatibility

60/100 concentric flue range

The 60/100 condensing range is suitable for all current Vokèra high efficiency (condensing) appliances. A flue kit adaptor is required to use the 60/100 concentric flue on the Verve domestic heat only boiler.

When used in the horizontal plane, the flue system (excluding horizontal terminal) should be installed so that it has a 1° to 3° fall-back to the boiler (17mm – 51mm per metre). This will enable any condensate fluid that may form, to drain via the condensate connection/trap.

It can also be used as a replacement flue system on older / obsolete Vokèra HE appliances, however you should contact the Vokèra Technical Support for specific advice.

Boiler and flue compatibility

80/125 concentric flue range

The 80/125 condensing range can be utilised only with certain appliances. A flue kit adaptor is required to use the 80/125 concentric flue on the Verve domestic heat only boiler. An adaptor is also required for other appliances to convert the flue outlet from 100mm to 125mm.

When used in the horizontal plane, the flue system (excluding horizontal terminal) should be installed so that it has a 1° to 3° fall-back to the boiler (17mm - 51mm per metre). This will enable any condensate fluid that may form, to drain via the condensate connection/trap.

Choosing the right control

Intelligent controls

Maximise energy and fuel savings

With the introduction of condensing technology, boilers have continued to increase in efficiency with most current appliances able to reach over 90% efficiency. However, the technology within boilers is now so advanced that, even with future developments, there is little chance of boiler efficiency percentages increasing much further.

The one area that can still help maximise the efficiency and overall performance of the boiler is the correct use of a control. Even with average efficiencies now reaching over 90%, this can be increased by a further 2%, with the simple addition of an outside weather compensation sensor for example.

Choosing the right control

There are a number of different controls available so establishing the most suitable one for your heating requirements may be confusing. Vokèra provide a range of controls that can be used with combi and system boilers, including: room thermostats, programmable room thermostats and the Vokèra BeSMART range that incorporates the most advanced technology available, such as weather compensation and OpenTherm.

The Vokèra **evolve** and Vision combi boilers come with a built-in 7 day digital clock which enables different settings for each day of the week. Additional controls can be added to **evolve** and Vision combi if it needs to be sited in a difficult to access location or for energy saving purposes.

Vokera BeSMART & Controls course

This course can help you understand the principles of combustion and the fundamentals of how control technology can work in conjunction with boiler operation. The course covers the range of Vokèra intelligent and basic controls as well as the new BeSMART Internet enabled thermostat. The course explains how to connect and install the BeSMART as well as the possibilities of remote room temperature, zoning and boiler control and operation.

Course Covers:

- Principles of combustion, modulation and boiler operation
- System and radiator design considerations
- Appraisal of existing systems
- Customer considerations
- Hands on training on how to connect Vokèra controls (including BeSMART OpenTherm and weather compensation) to Vokèra boilers
- 'Boiler Plus' scheme from April 2018.

To book your place on the controls course please call our training co-ordinator on 01727 744002 or email training@vokera.co.uk

(1) Can be used on heating only applications – contact Vokèra Technical Support for advice.
(2) Requires control interface – code 29450143 – contact Vokèra Technical Support for advice. The addition of an energy saving control will override any settings that have been programmed into the built-in digital clock on the Vision combi.

(3) Compact A 24 hour analogue clock kit includes a pipe cover that the analogue clock is incorporated into.
(4) Weather compensation – via physical sensor or internet look up via BeSMART App.

Choosing the right control

Providing energy saving solutions

How can controls improve the ErP efficiency

Differing types of controls are classified according to the ‘uplift’ in efficiency it brings to the package.

There are eight classes of control system, each adds an efficiency percentage to the boiler seasonal space heating ErP efficiency rating. That is how the package efficiency is calculated. Additional heaters such as a second boiler, heat pump or solar input will also adjust the package efficiency.

Class I – On/off room thermostat: A room thermostat that controls the on/off operation of a heater. Performance parameters, including switching differential and room temperature control accuracy are determined by the thermostat’s mechanical construction.

Class II – Weather compensator control, for use with modulating heaters: A heater flow temperature control that varies the set point of the flow temperature of water leaving the heater dependent upon prevailing outside temperature and selected weather compensation curve. Control is achieved by modulating the output of the heater.

Class III – Weather compensator control, for use with on/off output heaters: A heater flow temperature control that varies the set point of the flow temperature of water leaving the heater dependent upon prevailing outside temperature and selected weather compensation curve. Heater flow temperature is varied by controlling the on/off operation of the heater.

All evolve combis plus class VI controls (BeSMART with OpenTherm and weather compensation – via physical sensor or Internet look up) achieves an ErP A+ (98%) space heating package rating.

Class IV – TPI room thermostat, for use with on/off output heaters: An electronic room thermostat that controls both thermostat cycle rate and in-cycle on/off ratio of the heater proportional to room temperature. TPI control strategy reduces mean water temperature, improves room temperature control accuracy and enhances system efficiency.

Class V – Modulating room thermostat, for use with modulating heaters: An electronic room thermostat that varies the flow temperature of the water leaving the heater dependent upon measured room temperature deviation from room thermostat set point. Control is achieved by modulating the output of the heater.

Class VI – Weather compensator and room sensor, for use with modulating heaters: A heater flow temperature control that varies the flow temperature of water leaving the heater dependent upon prevailing outside temperature and selected weather compensation curve. A room temperature sensor monitors room temperature and adjusts the compensation curve parallel displacement to improve room comfort. Control is achieved by modulating the output of the heater.

Class VII – Weather compensator and room sensor, for use with on/off output heaters: A heater flow temperature control that varies the flow temperature of water leaving the heater dependent upon prevailing outside temperature and selected weather compensation curve. A room temperature sensor monitors room temperature and adjusts the compensation curve parallel displacement to improve room comfort. Heater flow temperature is varied by controlling the on/off operation of the heater.

Class VIII – Multi-sensor room temperature control, for use with modulating heaters: An electronic control, equipped with three or more room sensors that varies the flow temperature of the water leaving the heater dependent upon the aggregated measured room temperature deviation from room sensor set points. Control is achieved by modulating the output of the heater.

BeSMART

The smarter home heating control

The smarter way for customers to control their home heating from their mobile and save money...

OpenTherm Inside

BeSMART is one of the first Internet enabled heating control systems designed so that every home can enjoy the benefits of the BeSMART control. Specifically engineered to compliment the Vokèra boiler range, whilst maintaining compatibility with the majority of residential boilers, it is the ideal replacement for older thermostats.

Control home heating from anywhere, via smartphone, tablet or desktop

Compatible with the majority of boiler brands, not just Vokèra

Manage up to 8 different heating zones from anywhere in the world

Weather compensation adjusts boiler output to reflect ambient climate

Programme up to 3 comfort levels, suiting mood or pocket

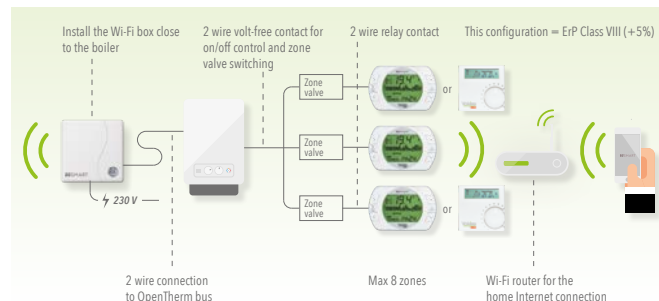

BeSMART alerts both the customer and the Vokèra Service Centre if something goes wrong, minimising disruption

Typical OpenTherm multi-zone configuration

Programmable Wi-Fi Thermostat for Zone

Valve Control and Boiler OpenTherm Connection

BeSMART ACCESSORIES:

CODE		DESCRIPTION
20111860		STANDARD BESMART WI-FI KIT KIT INCLUDES THE BeSMART THERMOSTAT AND WI-FI BOX AND POWER SUPPLY (ALSO INCLUDES: BATTERIES, BOILER OT WIRING KIT, WALL FIXINGS, ADHESIVE MAGNETIC FIXING STRIP AND INSTRUCTIONS).
20111875		BeSMART THERMOSTAT FOR USE WITH MULTI-ZONE APPLICATIONS - CAN BE COUPLED TO AN EXISTING WI-FI BOX TO ENABLE MULTI-ZONE CONTROL (ALSO INCLUDES: BATTERIES AND WALL FIXINGS).
20101743		RF PROGRAMMABLE ROOM THERMOSTAT FOR USE WITH MULTI-ZONE APPLICATIONS - CAN BE COUPLED TO AN EXISTING WI-FI BOX TO ENABLE MULTI-ZONE CONTROL (ALSO INCLUDES: BATTERIES AND WALL FIXINGS).
20111890		WI-FI BOX ENABLES EXPANSION OR UPGRADE OF EXISTING BeSMART THERMOSTAT THEREBY ENABLING ENHANCED FUNCTIONALITY VIA THE BeSMART APP (ALSO INCLUDES: WALL FIXINGS, MAGNETIC FIXING STRIP, WI-FI BOX POWER SUPPLY AND INSTRUCTIONS).
20112079		BOILER RF RECEIVER PRE-WIRED AND CAN BE USED TO CONFIGURE THE BeSMART THERMOSTAT INTO A STANDARD RF CONTROL; AND CAN ALSO BE USED IN THOSE OCCASIONS WHERE THE BOILER LOCATION HAS A POOR OR ABSENT WI-FI SIGNAL (ALSO INCLUDES: MAGNETIC FIXING STRIP).
20112080		RF OUTSIDE SENSOR KIT (PHOTOVOLTAIC) RF TEMPERATURE SENSOR (PHOTOVOLTAIC) FOR WEATHER COMPENSATION CONTROL. ONLY FOR COMPATIBLE BOILERS. (ALSO INCLUDES: BOILER RECEIVER WITH PRE-WIRED CONNECTOR AND WALL FIXINGS).
20112083		WI-FI ROUTER FOR SIM CARD SIM CARD ROUTER, PLUGS DIRECTLY IN TO A 230V POWER SOCKET TO CREATE A WI-FI NETWORK AND CONNECT BeSMART TO THE INTERNET. IDEAL FOR SECOND HOMES (DATA REQUIRED SIM CARD, NOT INCLUDED).
20112112		WI-FI EXTENDER EXTENDS AND IMPROVES THE WI-FI SIGNAL IN AREAS OF YOUR HOME WHERE THE WI-FI SIGNAL STRENGTH IS POOR OR INADEQUATE.

For more information and technical details please contact Vokèra Technical Support or visit: www.besmart-home.com

Choosing the right control

Intelligent energy saving controls

Outside weather compensation sensor

The outside weather compensation sensor manages the central heating temperature by regulating the boiler flow temperature depending on the external weather conditions, providing a consistent and comfortable room temperature.

Many Vokèra models come with the weather compensation technology built-in, meaning that by simply purchasing the external sensor, the homeowner can benefit from even further energy savings.

The weather compensation sensor can also be installed in conjunction with the Vokèra OpenTherm programmable room thermostat which will further enhance energy savings.

711 OpenTherm RF programmable room thermostat

OpenTherm is the most advanced control technology; the basic principle of OpenTherm is that it takes over the management of the heating flow temperature and raises or lowers the flow temperature from the boiler in order to maintain the desired room temperature.

By allowing OpenTherm to manage the flow temperature, the efficiency of the appliance is increased as the control constantly endeavours to maintain a low flow temperature. Condensing boilers are at their peak efficiency when operating at lower flow and return temperatures.

Basic room thermostats control the central heating temperature only, whilst programmable room thermostats can have different set temperatures for different periods of the day, offering greater flexibility and a simple solution to boiler control. It is usual to set your thermostat between 18° to 21°C.

7 day RF programmable room thermostat

This on / economy / off programmable room thermostat allows easy control over boiler heating timings and temperatures over a 7 day period. It has been developed to work with our current range of appliances⁽¹⁾ and is also compatible with several discontinued products.

(1) See 'Controls Compatibility' table on p.28. For discontinued product compatibility please contact Vokèra Technical Support. (2) Contact Vokèra Technical Support for advice.

RF (wireless) and hard-wired versions are available to ensure a simple installation to both new boilers and as a replacement for existing wired controls. This room thermostat can be configured as a 7 day programmer, a 5+2 day programmer with up to 24 temperature changes a day or as an untimed room thermostat.

Configured for use with the Compact A combi boiler, the receiver can quickly and easily be connected to the boiler using the Tyco connection socket (pictured left), meaning a Part P qualified electrician is not required to fit it. The Tyco connection can be re-configured or removed to facilitate use with other compatible Vokèra boilers.

RF room thermostat control

This on / off room thermostat has similar characteristics to the 7 day RF programmable room thermostat as it can be used to adjust the set room temperature.

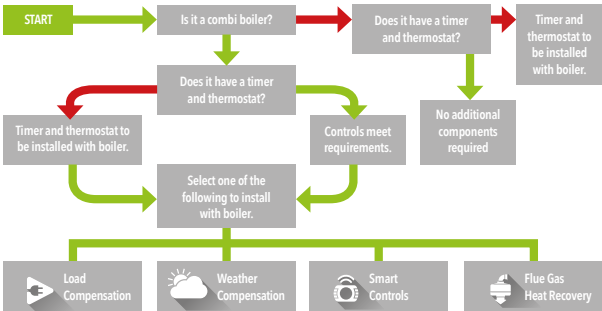

It is ideal for the Vision combi boiler as this optional room thermostat can be installed in a convenient location so that the user can easily adjust their heating temperature, without interfering with any programmed heating timings that have been set on the Vision C boilers built-in 7 day digital clock.

It is also compatible with all the current Vokèra ranges and can be used on older appliances that incorporate an integral clock.⁽²⁾

Compatible with BeSMART and can be used independently with Wi-Fi Box (20111890) and BeSMART App.

Boiler Plus

From April 2018 new legislation to raise efficiency standards of domestic heating are in place for England.

Technical training

Vokèra technical training delivers real value to Gas Safe Registered engineers. Our training focuses on an engineer's need to become familiar with the product and to enable quick and simple installation or repair. Our training is structured to ensure you cover: the appliance range, installation, operation, wiring, flueing, benchmark, fault finding and commissioning. To attend you must be Gas Safe Registered.*

For more information or to book a course call **01727 744002** or email **training@vokera.co.uk**

VOKÈRA PRODUCT COURSES	
BOILER INSTALLATION AND COMMISSIONING COURSE	1 DAY
FAULT FINDING PRODUCT COURSE	1 DAY
NEW ENTRANTS COURSE	1 DAY
BeSMART & CONTROLS COURSE (INC 'BOILER PLUS' OVERVIEW)	1 DAY
RENEWABLES OVERVIEW PRODUCT COURSE	1 DAY
INDIVIDUAL OR TAILORED WORKSHOPS	1 DAY
COMMERCIAL HEATING PRODUCT COURSE	1 DAY

Vokèra offers training across the UK & Ireland:

**excluding the BeSMART & Controls course.*

Support

After sales support

Customer care team – 0844 391 0999 (option 2)

We pride ourselves on providing a first class after sales service with a dedicated customer care centre in the UK and Ireland, supported with 41 factory trained Vokèra field engineers along with 85 service agents, who support every Vokèra installation.

- Every engineer carries a full complement of spare parts to help ensure a high first time fix rate
- Real time data field reports for service contracts
- Full monthly reports can be provided to monitor call outs
- One point of contact to report and discuss service issues
- Full audit trail to track service call

Technical support – 0844 391 0999 (option 4)

Our fully trained, Gas Safe Registered technical team provides post sales technical help to support the installer.

Product warranty

As with all domestic gas boilers, an annual service is recommended to maintain optimum performance, efficiency and safety. In addition to a parts and labour warranty* we also make a promise to all our customers:-

Our dedicated customer service team and Gas Safe Registered engineers are available 6 days a week to support the needs of every single Vokèra boiler installation. They aim to respond to every call within 48 hours or less, or at a time agreed with the homeowner. They will make every effort to solve any technical problem over the phone, answering quickly, politely and at all times acting in the best interest of our customers.

**All warranties are subject to registration and annual servicing.*

Accreditations and quality assurances

Vokèra is recognised for the quality and reliability of its products. At every stage from research and development, through to production and after sales support, we build quality in as standard.

- BS EN ISO9001:2000 Approved
- Members of CIPHE and IDHEE
- Supplier members of the Association of Plumbing and Heating Contractors (APHC)
- Members of the Heating and Hotwater Council (HHIC)
- Support the 'benchmark' initiative
- Registered Gas Safe with our technical support team and trainers all being Gas Safe registered
- Every product is pre-tested at the factory ensuring the highest quality and reliability

Renewable products

Vokèra by Riello renewable products provide low carbon heating and hot water systems for domestic and commercial applications.

We are committed to reducing energy consumption and are focused on producing products that minimise impact on the environment. With a wealth of experience in home heating, we are able to provide the product and the knowledge to ensure a reliable and successful installation. By offering a range of solar thermal collectors and air source heat pumps, we can supply you with the product you need to make the most of sustainable energy resources, while the experienced Vokèra pre sales team support each project from start to finish. Be it for one home or one hundred, you can trust us to provide the complete and correct renewable energy system for you.

Heat pumps

Vokèra AriaPRO air source heat pump

Outputs (kW): 4 – 6 – 8 – 12 – 15

The AriaPRO air source heat pumps are ideal for new build and retrofit applications, their minimal installation preparation is making them a popular renewable technology. Utilising ambient air and upgrading it to a more useful temperature between 35° and 60° makes AriaPRO ideal for underfloor heating systems, oversize radiators, DHW and heating swimming pools.

AriaPRO heat pumps have a coefficient of performance of up to 4.2 (1kW of electricity used to generate 4.2kW of heat). It is supplied with a built-in external sensor, supplementary external sensor and remote control to maximise efficiency.

It has an integral expansion vessel (2 litres with the 4, 6 and 8kW and 3 litres with the 12 and 15kW outputs). Its twin rotary compressor managed by PAM and PWM logic control ensures both temperature and efficiency is optimised at all times leading to fuel efficiency, lower noise and improved end user comfort.

- ErP Class A
- Coefficient of performance up to 4.2
- Ideal for new build and retrofit applications
- 2 year warranty⁽¹⁾
- Simple installation with minimum installation preparation
- Ideal for underfloor heating, oversize radiators, DHW and heating swimming pools
- Compatible with the AquaFlow HP

(1) Subject to registration

Solar thermal

The Vokèra Zenith packages enable simple ordering of a complete Zenith system and are compatible with the Vokèra Mynute i, Vision system or Mynute VHE open vent boilers and AquaFlow Twin cylinders.

Vokèra Zenith on tile flat plate solar thermal collectors

Zenith on tile collectors provide optimum performance when sited on a south facing roof with an angle of inclination between 35 to 45° or with an east/west facing roof using a split system.

- Ideal for retrofit applications
 - Highly selective coating on copper absorber plate for excellent absorption
 - Pressurised system for optimum performance
 - 4cm rock wool lining ensures excellent heat retention
 - Solar Keymark seal of approval
 - 10 year warranty⁽¹⁾
- A well installed system has life expectancy of over 20 years
 - Full pre and post sales support via Vokèra Pre Sales Advice Team and Technical Team

Vokèra Zenith evacuated tube solar thermal collectors

Zenith evacuated tube collectors provide improved efficiency, making them a more viable option where the installation position falls outside of the ideal positioning for flat plate collectors. Also Evacuated tube collectors provide greater efficiency due to the vacuum within the glass tubes enabling them to retain absorbed heat for longer.

- Ideal for new build and retrofit applications
 - Highly selective coating on copper absorber plate within each tube for excellent absorption
 - Pressurised system for optimum performance
- Greater application flexibility and efficiency
 - Solar Keymark seal of approval
 - 2 year warranty⁽¹⁾
 - Full pre and post sales support via Vokèra Pre Sales Advice Team and Technical Team

(1) Subject to registration

Commercial products

Vokèra by Riello specialises in the domestic and commercial heating and hot water market and provides products that fulfil most modern requirements. Complementing the domestic boiler portfolio, presented in this guide, we also offer a comprehensive commercial boiler range and renewables portfolio.

Condexa Pro

- Standalone and cascade applications
- Wall mounted, free standing and back-to-back installation options
- Wide range of accessories for almost unlimited configurations

Steel Pro Power

- Modular floor standing commercial boilers
- Standalone and cascade applications
- Outdoor installation via accessories
- Cascade applications up to 1.3MW

For more information on the above products visit www.vokera.co.uk/commercial or request the relevant catalogue by emailing us at commercial@vokera.co.uk

VokèraAffinity

If you are a gas installer registered with either Gas Safe Register (UK) or RGII (ROI) then you really should become a member of Vokèra Affinity.

Now, with just one simple online registration you can register your product installation with Vokèra to receive **FREE Gas Safe notification (UK only)***, **extended warranty activation**, automated reward points to redeem against a host of rewards, FREE and discounted training, access to spares and stockists and much more.

Not yet a member? Sign up today!

In the UK scan or visit
www.vokeraaffinity.co.uk

In Ireland scan or visit
www.vokeraaffinity.ie

* In ROI, boiler installation registration with RGII must be carried out in the usual way. Vouchers are available as a reward item within Affinity, which can be used towards the cost of RGII forms for certification – saving you money!

VokèraApp

FOR THE INSTALLER ON THE GO

The VokèraApp provides a gateway to Vokèra Affinity and a host of support material:

- Affinity member area
- Mobile access to literature
- Boiler spares & accessory listings
- Stockist locator
- Promotions
- Technical and customer support

If you don't have a QR code reader, search "Vokera" on Google play or the App store.
